

Ostap Kryvytskyy

Senior Software Engineer

ostapkr@gmail.com

Executive Summary

I am Senior Software Engineer with commercial experience in various software technologies, including Kubernetes, Helm, Helm Charts, Docker, Microservice Architecture, backend J2EE, Spring/Hibernate, etc. and frontend skills (JS, RegExps, static HTML/CSS, images and protocols). Professional in the area of risk management and telecommunications with expertise in network engineering and customer support. Have experience in designing and building highly scalable distributed solutions based on microservice architecture. I have deep knowledge and extensive practical experience in cloud K8S, Helm, Docker, Spring Framework, Hibernate, SQL and NoSQL databases with relevant secure networking protocols. During my software practice solutions were built with focus on performance, reliability and security including post-quantum secure algorithms. I have work experience with data mesh and machine learning algorithms. I have been interested in genetics, in NLP area used variously and DNA processing as well as chemistry, medicine and chemical reversible or irreversible reactions. Also, interested in parallel computing, streaming data pipelines, high-load enterprise systems and solution architecture as well as quality solution implementation. While working with microservice architecture I faced with Python, Perl and Go and adapted the software according to the business end needs. Experienced in development on various programming paradigms and can adapt to any depending on the business needs. Additionally, I have hands-on experience in frontend development using Angular and React.js and other various frontend technologies. I have strong background in the Computerized Systems and Computer Science area from the Lviv Polytechnic National University of Ukraine. During the engineering, I try to get the most of the software, OOP, follow SOLID principles, use design patterns and come up with flexible and change-ready solutions. Combined with my hard skills, I have a set of soft skills that help me to build strong bonds with team. The most significant are: problem-solving, creative thinking, communication, time management, leadership, risk management, resistance and persistence. Recently I have been focused on health and work safety, including software security and reliability. Approved English level: B2

Professional Experience

Company: Sedgwick - LSM, Lviv, Ukraine

Duration: Sep 2025 - Feb 2026 (6 months)

Role: Senior Software Engineer

Project Description: The world's leading risk and claims administration partner. The project is intended to provide Claims and Risk Management Administration support and Law Partnering solution. My team was responsible for optimizing, building and planning a Software for microservices in the cloud with focus on reliability, security and scaling. During my work on the project I delivered and implemented WebLogic local setup amongst others issues solved with the focus on Cloud Application reliability. I delivered a software solutions and presented it for customer's top management and my colleagues. Among deliveries I conducted support and extensible documentation for the software to be easily implemented by the DevOps in production.

Responsibilities: Senior Software Engineering duties, software excellence and cloud software deliveries

Technologies: Java 21, Kubernetes, Helm, Helm chart, Docker, Oracle WebLogic, JasperSoft Report and other various technologies stack

Company: GlobalLogic Ukraine, Lviv, Ukraine

Duration: Jan 2024 - Mar 2024 (3 months)

Role: Senior Software Engineer

Project Description: The project is intended to build Generative AI solution. My team was responsible for planning and building

✕ 1 Kozelnytska St., Lviv, Ukraine 79026

The data is shared solely for the purpose of assessing the candidate's potential involvement in the current recruitment process. The data must be processed in compliance with the GDPR and all applicable data protection laws. If the candidate is not selected or the assessment process is complete, all shared data must be deleted immediately.

a Software gateway for AI microservices in the cloud with focus on security, reliability and scaling. During my work on the project I delivered and implemented versioning solution amongst others issues solved with the focus on Cloud Application reliability. I delivered a software with a team and presented it at the demo for the other colleague's teams. Among deliveries I conducted support and extensible documentation for the software to be easily picked up by the colleagues based on the business request.

Responsibilities: Cloud Software Gateway planning, building and integration with versioning support and modern security integration and scaling solution, plugins building and integration, participating in DevOps activities and support. Conducting demos and participating in the meetings.

Technologies: Azure Kubernetes, Docker images, Apache APISIX with plugins integration, Java EE 21 and Lua, SonarCloud.io, GitHub, backstage.io, Keycloak with oauth 3.0 plugins, multiple supportive scripting languages and tools like Lens, Rancher, K9s, Grafana, Elastic Cloud for logs monitoring, etcd, considered in between reliable loadbalancing cloud solutions, Helm, ingress controller setup

Company: Globallogic Ukraine, Lviv, Ukraine

Duration: Sep 2021 - Dec 2023 (over 2 years)

Role: Senior Software Engineer

Project Description: Cloud based solution for telecommunication providers (and banking operator) based on cloud and microservice architecture. The project is intended to build and support large telecommunication infrastructure in the cloud. My team was responsible for planning and building a Cloud Software solutions for large telecommunication operators in the world with focus on security, availability, reliability and scaling. During my work on the project I delivered and implemented various solutions with the focus on Cloud Application security and availability. One of the most challenging was restoring infrastructure after a failover to it's correct state amongst others various complex issues solved. I delivered a software solutions within a team and presented it at the demo for the other colleague's and management. Among deliveries I conducted support and extensible documentation for the software solutions.

Responsibilities: Senior Software Engineering duties, Cloud Solutions Software Engineering, Software Security Engineering

Technologies: Kubernetes, Helm, Spinnaker, Jenkins, QA automation (Python based), GoLang and Java EE 21

Company: ETIYA, Lviv, Ukraine

Duration: May 2020 - Aug 2021 (over 1 year)

Role: Software Engineering Team Leader

Project Description: The project is intended to support Business Solution for major Canada's telecommunication operator. My team was responsible for planning and building a software deliveries within multiple technology stack. As a Software Engineering Team and Tech Leader I was responsible for team care duties as well. During my work on the project my team implemented and delivered a major software breakthroughs for the customer in business field. One of the most challenging was sales point start-up and various support solutions amongst others multiple complex issues solved. I delivered a software solutions within a team and presented it at the demo for the Ukrainian division of a company and management. Among deliveries my team conducted support and extensible documentation for the software solutions.

Responsibilities: Lead Software Engineering duties, Software solutions engineering, architectural tasks, customer support and team care

Technologies: The most cutting edge Java 17 and Angular technology stack.

Company: PASS IT-Consulting Corporation, Lviv, Ukraine

Duration: Jul 2019 - Apr 2020 (10 months)

Role: Wide range Software Engineer

Project Description: The project is intended to support travel integration solution of a widely known Europe's airline operator. I was responsible for implementation of new standards, widely applied in aeronautics. The project consisted of multiple parts, responsible for full travelling lifecycle from taxi from home to a hotel in a destination. I was working within a multinational team

and thoroughly conducted duties ranging from software planning, brainstorming to deliveries and quality assurance.

Moreover I participated in a tender of a new life-saving application during COVID-19 pandemic and delivered an MVP.

Responsibilities: Lead Software Engineering - tasks ranged from design to implementation

Technologies: XML, Java EE, ReactJS, Android

Company: EPAM, Inc and partners, Lviv, Ukraine

Duration: Sep 2015 - Jun 2019 (almost 4 years)

Role: SAP Hybris Engineering

Project Description: The projects are intended to support SAP Hybris E-Commerce Platform and Integration Services (B2C and B2B solutions) for online fashion global retailer, beauty care distributor globally, global floor producer and its online sales and global construction equipment supplier's (B2B). Working with large names delivered multiple business challenges and I delivered solutions to all of them. Tasks ranged from design to implementation of a new payment provider solution, multiple payment flows enhancements, SAP Hybris software support amongst multiple various other complex issues solved.

Responsibilities: Senior Software Engineering duties and customer support, managing customer communication, coordinated developers' team work, conducting deliveries, facilitating communication between backend and various customer's teams, design and implementation of an integration layer between backend sales solution and well-known trusted payment providers, testing, conducting automated testing implementation.

Technologies: SAP Hybris, Java EE, Jenkins CI, MySQL, Apache Ant, Gradle, JUnit

Company: Globallogic Ukraine, Lviv, Ukraine

Duration: Mar 2015 - Aug 2015 (6 months)

Role: Java Engineer

Project Description: The project is intended to support Smart interactive white board which shares information to mobile and web via WiFi, Bluetooth and TCP-IP technologies for major Canada based studying equipment supplier globally. I was working within a software team and conducted on-site travel to a customer. My duties included backend AWS and front-end JS engineering.

Responsibilities: Senior Software Engineering duties, Java and various backend and frontend software solutions engineering, including:

- Designed and implemented Google Analytics monitoring
- Designed and implemented AWS Cloud monitoring via CloudWatch and Librato
- Designed and implemented JSON direct performance metrics via Librato
- Designed and implemented backend performance metrics
- Performance and automation testing implementation
- Done unit tests for backend and front-end
- Developed JavaScript front-end
- Implemented multi language support
- Communicated with customers with intensive business analytic activities
- Conducted business trips on-site

Technologies: AWS Elastic Cloud, AWS DynamoDB, AWS CloudWatch, Librato, Apache Maven, Apache Ant, Apache Tomcat, Java 6 EE, Android SDK, Java Bluetooth Stack, Eclipse EE, I18N for Java Maven tools, REST UI, JSP, NodeJS, Javascript, Karma, PhantomJS, I18N

Company: ZERT, Lviv, Ukraine

Duration: Mar 2012 - Feb 2014 (almost 2 years)

Role: Senior Java and Android Engineer

Project Description: The project is dedicated for Enterprise Content Management System: the system, which manages manuals and reading articles using its own strategy. Customers can edit and translate advanced books easily. Furthermore, reading is being converted to various formats including PDF and HTML.

The project is dedicated on the same engine for Enterprise Risk Management System, which is a web based application, which collects your risk management in one and the same place. It's a nice user friendly web system for managing risks on multiple production facilities. Customers have their accounts and submit suspicious activities from various devices.

Responsibilities: Java SE/EE Software Developer and Android Engineering duties

- Communicated with customer about performance analytics and optimization, as a result uplifted major JBoss EE version from 6 to 7
- Designed and implemented on the fly SCM move from SVN to git
- Developed Imaging IO
- Optimized BLOBs implementation
- Developed multi language support
- Developed SWING and Android based front-end
- Developed Backend EJB
- Various front-end engineering
- Performance and automation testing implementation

Technologies: JBoss 7, JBoss 6, TortoiseSVN, git, JMagick, Imagemagic, MySQL, MS SQL Server

Company: SoftServe Inc., Lviv, Ukraine

Duration: Aug 2009 - Jul 2012 (almost 3 years)

Role: Java SE/EE Engineering

Project Description: The project is a dedicated Enterprise Lifecycle Management Application solutions, which involved design and implementation of the integration agent for enterprise SCM, runtime synchronizer between two enterprise issue tracking systems and Eclipse IDE Plugin for SCM system. My team was responsible for design and implementation of reliable and secure software solutions. The most challenging task was an implementation of the agent from scratch amongst other multiple complex issues solved.

Responsibilities: Senior Software Engineering duties and customer support

- Communicated with customer directly
- Designed and implemented new integration agent service
- Designed and developed SWT (Eclipse) new wizardflow
- Optimized business logic
- Performance and automation testing implementation

Technologies: Proprietary enterprise SCM, Eclipse SWT, Apache Maven, Apache Ant

Education

Institution: LPU (Lviv Polytechnic University), Ukraine

Dates Attended: September 2002 - May 2008

Qualification(s): Master of Science

Major Subject(s): Computerized Systems and Automatics
